5. Dear Diana,

I appreciate very much your concern about our problem with transportation fees and government taxes.

The samples are being assembled in our antenna and, as soon the assembly is done and the tests are made, I will let you know.

We expect our final product to be a success and our client order more units. That should happen, I will contact you for the best solution.

Best regards,
Claudio

6.Hi Diane

Many thanks for your reply

The Frequencies that need to achieve 6DBi and 1.5VSWR are, 1800. 2600 and 3400

We can provide the Nex10 but only for LRM195 or ¼" cable – it is possible to increase the cable entry hole of the Unit?

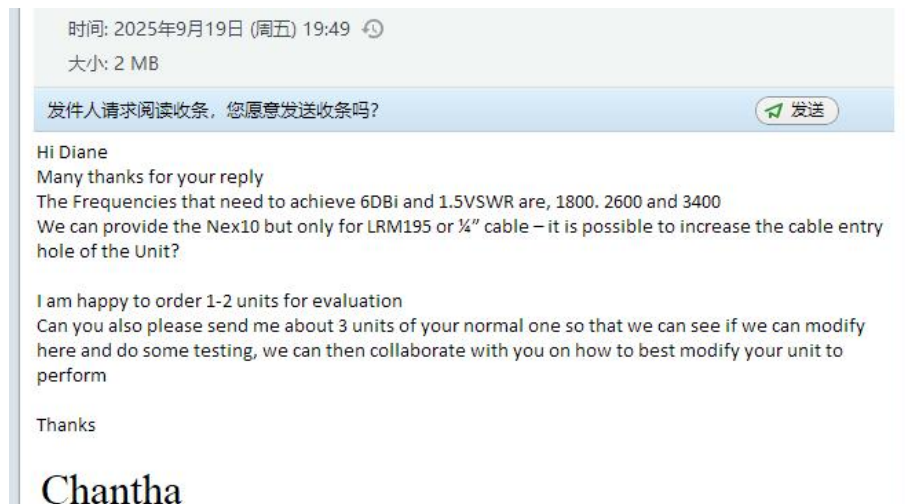

I am happy to order 1-2 units for evaluation

Can you also please send me about 3 units of your normal one so that we can see if we can modify here and do some testing, we can then collaborate with you on how to best modify your unit to perform

Thanks

Chantha
